

Tableau int arr[5] en mémoire (32 bits, little-endian)

Adresse	0x1000	0x1004	0x1008	0x100C	0x1010
Contenu (hex)	0A 00 00 00	14 00 00 00	1E 00 00 00	28 00 00 00	32 00 00 00
Index					
Valeur	arr[0]	arr[1]	arr[2]	arr[3]	arr[4]
	10	20	30	40	50

5 éléments × 4 octets = 20 octets total

Formule : `&arr[i] = &arr[0] + i × sizeof(int)`
Exemple : `&arr[3] = 0x1000 + 3 × 4 = 0x100C`
